Introduction

Equations

Equation 0.1 is a general linear equation.

$$t[s] = 1[s] * A[km^2] + 2[s] \quad (0.1)$$

We can use the `{equationomatic}` package within quarto.

However, below actually fails being parsed by quarto.

However, if we `print`, rendering succeeds.

$$mpg = \alpha + \beta_1(cyl) + \beta_2(displ) + \epsilon \quad (0.2)$$

Equation 0.3 & Equation 0.4 are equations. Note, the `label: eq-mtcars` does nothing. The pasted `{#eq-*}` does the trick.

$$mpg = \alpha + \beta_1(cyl) + \beta_2(displ) + \epsilon \quad (0.3)$$

$$\hat{mpg} = 34.66 - 1.59(cyl) - 0.02(displ) \quad (0.4)$$

Plots

```
